This major research study provides a fresh, critical look at the way automobile electronics are and should be built. Written by Silicon Valley pioneer John Hall, this book is based on his nearly 40 years of experience in developing and producing semiconductors for the automobile industry and other customers. Highly readable and comprehensible for even beginning students of electronics and semiconductor design, this volume provides an in-depth explanation of the factors to be considered when building vehicle systems. Starting with a concise history of vehicle electronics, Hall walks the reader through the environmental conditions faced by these systems and the variety of failure mechanisms that can occur. Basic and advanced semiconductor

issues raised by vehicle implementation are then discussed in detail. A wide range of issues confronting designers--from over-marketing of risky features to time and cost constraints--are explained. Complex electronic modules from many different manufacturers are examined and discussed as real-world case studies of good and bad design techniques. Hall concludes by providing design recommendations that will allow vehicle electronics system developers to build much tougher devices at little or no incremental production cost. This book is the first major work to focus on key issues emerging as major causes of safety and performance problems. Vehicle makers increasingly seek market advantages by providing ever-more-capable electronics in their products. While these features add much value to vehicles, they fail in ways that are beyond the experience and comprehension of most technicians and accident investigators. By combining decades of design experience and innovation with extensive research, Hall has produced unique insights and explanations so engineers can prevent most, or perhaps all, of these problems. John Hall is one of Silicon Valley's most prolific independent pioneers and inventors. He founded Union Carbide's semiconductor operation in 1962. He is a founder of Interstil and Micro Power Systems. He is the inventor of the first electronic watch, first LCD digital watch; first CMOS liquid crystal display hand held calculator, color autofocus cameras among many successful commercial products. He has worked for many American and foreign automakers on specific projects such as integrated two way radios and seat belt interlocks. He is working with DoD on hardening

Nigel Calder, a diesel mechanic for more than 25 years, is also a boatbuilder, cabinetmaker, and machinist. He and his wife built their own cruising sailboat, Nada, a project they completed in 1984. Calder is author of numerous articles for Yachting Monthly and many other magazines worldwide, as well as the bestselling Boatowner's Practical and Technical Cruising Manual and Boatowner's Mechanical and Electrical Manual, both published by Adlard Coles Nautical. Here, in this goldmine of a book, is everything the reader needs to keep their diesel engine running cleanly and efficiently. It explains how diesel engines work, defines new terms, and lifts the veil of mystery that surrounds such engines. Clear and logical, this extensively illustrated guide will enable the reader to be their own diesel mechanic. As Nigel Calder says: 'there is no reason for

a boatowner not to have a troublefree relationship with a diesel engine. All one needs is to set the engine up correctly in the first place, to pay attention to routine maintenance, to have the knowledge to spot early warning signs of impending trouble, and to have the ability to correct small ones before they become large ones.'

The Ford Bronco is a sport utility vehicle that was produced from 1966 to 1996, with five distinct generations. The Bronco permanently entered American popular culture on June 17, 1994, when a white 1992 model owned and driven by Al Cowlings with O. J. Simpson, who was wanted for the murders of his ex-wife and her friend, attempted to elude the Los Angeles Police Department in a low-speed chase, which was nationally televised and viewed by millions nationwide. This is complete story from conception through discontinuation in 1996, told by historian
